**Better Insights.
Reduced Errors.
Improved Revenues.**

- Graphical EDI mapping
- Rules based validation
- Translations to CSV, XML, JSON for simplified ETL, Data Analytics

- Secure data exchange, EDI
- Turnkey healthcare standards
- Healthcare Regulatory compliance
- Ease of management

Using BNETAL's solutions SureEDI and SureDeliver for EDI, ManageSecure for digital certificate management and BNETAL EDI services, you can simplify your operation, reduce errors, and gain valuable insights.

BNETAL Electronic Data Interchange Offerings

WHAT IS EDI?

The Electronic Data Interchange (EDI) standard ASC X12 is widely used in many domains including supply chain, retail, transportation, shipping and healthcare. EDI forms the industry accepted language of communication between businesses that transact millions of transactions on a daily basis.

EDI CHALLENGES

Implementation variations, evolving standards and regulatory requirements make processing EDI data a lengthy and expensive undertaking. The result is often complex "spaghetti" custom code that is hard to maintain and manage. Further, transport and security requirements for trading partner variations and regulatory compliance and operational robustness can be challenging.

EDI SOLUTIONS

Robust solutions that empower users to easily configure EDI processing has the potential for significant improvements in efficiency of implementation, trading partner on-boarding, and operation. Reduced operational errors means quicker processing, less support costs and increase in efficiency and revenue.

BNETAL EDI OFFERINGS

BNETAL offers solutions and expertise in support of your EDI operation:

- EDI mapping to your organization's trading partner specific implementation variations
- Robust validation for your business needs
- Integration with your backend EDI processing
- Business Workflow and Process automation
- Support for integration with trading partner connectivity methods
- Managed File Transfer (MFT) implementation
- Data exchange security review, Risk Analysis and Remediation of any security gaps
- Technical and Process level Reviews against regulatory compliance requirements within your domain

BNETAL SUREEDI

Powerful solution for EDI mapping, validation and translation (to formats like CSV, XML and JSON for simplified processing). EDI maps can be defined for different transactions and can be tailored to trading partners. Dynamic user rule based validation. Many fully built EDI mapping templates help get you started so you can hit the ground running and quickly implement the validation and translation using the templates. Easy to use framework for custom extensions for both validation and translation.

BNETAL SUREDELIVER

When integrated with BNETAL's secure gateway SureDeliver®, SureEDI can support end-to-end (data content and transport) processing.

Gain insights into EDI data using SureEDI's translation to CSV, XML

Reduce errors in EDI processing by using SureEDI validation, reducing cost, time.

Improve ease of managing trading partner specific implementation variations using SureEDI.

Simplify transport of EDI transactions with SureDeliver

Improve security, operational robustness and regulatory compliance.
