## Business, Security and Systems Resource Management

If you are increasingly concerned about keeping the systems afloat, the user accesses in working order, ensuring high end security of applications and data, and ensuring that all accesses to your information assets are secure, you are in good company. Business owners, leadership of non-profit and governmental organizations, CIO's and systems management Administration staff in small, midsize and large businesses alike are concerned with good reason.

Solutions to these problems are often choppy, fragmented, difficult and expensive to implement, not intuitive to operate and expensive long-term propositions. Integrated solution is either not available or is simply offered to you as service.

**ManageSecure®** is an integrated solution for your business needs for Systems Security and Security Resource Management. **ManageSecure®** lets you take charge of your systems security, and security resources. It lets you organize your systems management and administration and lets the systems staff even take a comfortable vacation or two!!

### ManageSecure® Overview

ManageSecure® is the first product in its category to offer an *integrated set of tools to implement several inter-related and dependent security functions*, such as *single sign-on, role based access control, management of digital identities, and management of security resources*, such as *passwords and digital certificates*.

**Simplified Organization,  
Management and Monitoring  
of Security...**

By providing these functions in an integrated package, **ManageSecure®** saves time and resources that would otherwise be needed to integrate several disparate products and systems, or to custom develop security solutions to implement strong web application security. **ManageSecure®** support for certificate authority functions allows an enterprise to issue and manage digital certificates, hence drastically cutting the cost of a public key infrastructure. Its adherence to the industry standards and specifications, such as the security assertion markup language (SAML) improves interoperability with other products and systems.

**Complements and  
greatly strengthens  
Basic Firewall Security..**

## Security Resource Management and Provisioning

By allowing system administrators to centrally and securely manage and provision several day to day security resources that are needed in a web based enterprise, such as digital certificates and keystores, passwords, **ManageSecure®** improves security while saving time and money.

**Simplified Organization,  
Management and Monitoring  
of Security...**

## Digital ID / Public Key Infrastructure Management

ManageSecure® drastically lowers cost of owning and managing a public-key infrastructure (i.e., one that uses digital certificates and SSL) by supporting digital certificate lifecycle management functions (request processing, certificate generation, and revocation).

**Cost Effective Issuance and Management of  
Digital Certificates**

## Server Security Monitoring

ManageSecure® improves the reliability and availability of your secure (SSL) servers and the web-services that are hosted on them by monitoring the security attributes of these servers. Notifications are generated for error conditions, and advance notifications for certain impending error conditions are also generated so that corrective action can be taken before errors occur.

“We have been using ManageSecure to manage and monitor our deployment related security resources such as SSL servers, LDAP servers, certificates. ManageSecure provides timely reporting and alerting on these resources, which enables timely and proactive action on their upkeep. ManageSecure has been running in our environment for several months and has been very stable. The ManageSecure staff is very knowledgeable and has provided excellent support.”

*~Deployment Technical Lead  
Scientific Applications  
International Corporation,  
Atlanta*

“We use ManageSecure to secure access to our ICONSurvey applications. Within minutes of installing, we were up and running in a secure mode. ManageSecure saved us time and improved security. It is easy to install and use and reduces the pain of managing security resources like certificates and keystores. I highly recommend this product.”

*~CEO, ICONTechnology  
Group*

## Single Sign-On, Access Control Management

ManageSecure® enhances security while improving user experience through its strong authentication and single sign-on support (a user can login to one web-server and use applications to which he/she is authorized, throughout the network, without logging in multiple times).

**Complements and  
greatly strengthens  
Basic Firewall Security..**

Several authentication methods, including login/password, digital certificates, LDAP, Kerberos/Active Directory and JAAS are supported, providing a highly flexible authentication infrastructure. Further, interfaces are provided to extend and customize authentication.

ManageSecure® allows you to centrally manage and control access to mission critical web applications across the enterprise. It provides out of the box support for role based access control, providing a highly customizable set of policies and role mappings.

## About us: Business Networks International (BNETAL)

Business Networks International Inc. is an Atlanta GA based software consulting firm with offices in Syracuse, NY; San Jose, CA; and Bangalore, India. Our senior security professionals have a combined experience of over 40 years in the IT industry in areas ranging from Security, Encryption, Authentication, Public Key Infrastructures, Firewalls, Networking, TCP/ IP, Protocols, and Hardware. We have successfully executed large projects for Fortune 500 companies nationwide.
